# **ABSTRACT**

**Times New Roman**

Fluvial river processes evolve over time in response to the constant interaction between sediment and the water column. If vegetation is present within the water column, the change in turbulence characteristics will impact the movement of sediment, in particular the settling velocity. In this paper, the influence of vegetation on the settling velocities of sediment particles is studied experimentally. The non-submerged vegetation friction factor in steady uniform flow is considered by under different flume discharge quantities. The main outcomes can be summarized as follows:

**Times New Roman 1.5**

**Key words:** sediment rigid vegetation settling velocity turbulence characterize

# ABSTRACT

Times New Roman

Based on the assumptions of the construction of Shanghai international shipping center, the Yangshan Port of Shanghai international shipping center had been implemented in 2002. So the shortage of the capacity of Shanghai Port and port-channel depth can be well handled. The construction of a 15m water depth of Yangshan Deepwater Port can guarantee a more powerful and solid status of Shanghai international shipping center . Yangshan Deepwater Port is mainly responsible for the transit loading and unloading tasks of its hinterland ,both within the ocean and near the ocean, international and domestic .The service object of the Yangshan Deepwater Port is positioned in a large container ship. According to projections, the capacity of the two arrangements of Yangshan port is 2.1 million TEUs,1.85 million TEU of International lines and 250 000 TEU of the extension lines.

# Abstract

## Times New Roman

The ideological and political education is a political practice of man's ideology; in essence, it is an operating process of power. On the one hand, in the present ideological and political education, the abstract concept and speculation overshadows the real ideological and political education in reality; on the other hand, through removing differences between education and the ideological and political education, it eliminates the authority dimension of the ideological and political education. Foucault's discipline theory suggests the possibility of embedding micro-power in the daily life, which opens the research scope of power anthropology and provides theoretical inspirations for the interpretation of the ideological and political education.
